

System Process Viewpoint

Domain: **Functional** Aspect: **Process & Behavior**

Example

Purpose

The System Process Viewpoint provides the functional representation of the system using a black-box approach

- the representation of the SOI and all Context Element(s)
- the System Function(s) the SOI shall be able to perform
- the Context Function(s) the Context Element(s) are expected to perform
- the exchange between SOI System Function(s) and Context Function(s) of Context Element(s)
- the functional flow(s) crossing the boundary between SOI and Context Element(s)

Applicability

The System Process Viewpoint supports the "System Requirements Definition Process" activities of the INCOSE SYSTEMS ENGINEERING HANDBOOK 2015 [§4.3] and contributes to the System Function Definition and the System Functional Interface Identification.

Stakeholder

- [Customer](#)
- [Safety Expert](#)
- [Security Expert](#)
- [System Architect](#)
- [User](#)

Concern

- How does a system function interact with its environment?
- How is the system interacting with the identified external entities?
- What are necessary inputs for operating the system expected to be provided by other external entities?
- What are the functional interfaces of the system?
- What are the scenarios a system function is utilized in?
- What is the functional scope of the system?
- What services are expected from external entities?
- Which functions are out of scope of the system?
- Which functions will the system provide?

Presentation

The Functional Scenario Activity(s) and their sequence related to a System UseCase are represented in activity diagram(s) featuring swim lanes. The swim lanes are typed with Context Element(s) and SOI usage from the System Context(s). Note: It is recommended to compile separate activity diagrams refining Use Case and System Context.
