

System Requirement Viewpoint

| Domain | Aspect | Maturity |
|------------|-------------|--------------|
| Functional | Requirement | released |

Example

| # | △ Id | Name | Applied Stereotype | Text | Derived from Stakeholder Requirement | Source |
|----|---------------|----------------------------------|--|--|---|--------|
| 1 | | Fire Detection | | | | |
| 2 | SYS-REQ-001 | 24/7 Forest Fire Recognition | SAF_SystemFunctionalRequirement [Class, Element] | The FFDS system shall allow a forest fire recognition day & night. | | SDS |
| 3 | SYS-REQ-002 | Forest Fire Detection | SAF_SystemFunctionalRequirement [Class, Element] | The FFDS system shall allow a forest fire detection acquiring data collected by terrestrial-based and aerial-based systems. | CPBLTY-11 Fire Detection | SDS |
| 4 | SYS-REQ-002.1 | Smoke and Fire Detection | SAF_SystemFunctionalRequirement [Class, Element] | The FFDS system shall allow querying and analysis of the provided sensor data using a smoke and fire detection algorithm. | | SDS |
| 5 | SYS-REQ-002.2 | Smoke and Fire Alert | SAF_SystemFunctionalRequirement [Class, Element] | When a forest fire is detected the FFDS system shall be able to warn interacting agents, FFDS operator and Fire Department, about the danger. | | SDS |
| 6 | | Fire Monitoring | | | | |
| 7 | SYS-REQ-003 | Forest Fire Evolution Monitoring | SAF_SystemFunctionalRequirement [Class, Element] | In the event of a forest fire the FFDS system shall allow a specific area of interest observation interacting with aerial-based systems. | CPBLTY-12 Fire Monitoring | SDS |
| 8 | | Fire Prediction | | | | |
| 9 | SYS-REQ-004 | Forest Fire Spread Prediction | SAF_SystemFunctionalRequirement [Class, Element] | In the event of a forest fire the FFDS system shall allow a fire spread prediction using empirical and physical fire spread models. | CPBLTY-17 Propagation Estimation Capability | SDS |
| 10 | | Fire Assessment | | | | |
| 11 | SYS-REQ-005 | Forest Fire Damage Assessment | SAF_SystemFunctionalRequirement [Class, Element] | For evaluating the impacts of forest fire in landscape and biodiversity the FFDS system shall allow the determination of burned and fire affected areas using digital image processing of pre- and post-fire images. | | SDS |

Purpose

The System Requirement Viewpoint specifies functions, non-functional properties, or constraints of the system. System Requirements are captured, the interrelationships between functional and non-functional requirements on the same level of abstraction and the traceability to Stakeholder Requirements are depicted.

Applicability

The System Requirement Viewpoint supports the "System Requirements Definition Process" activities of the INCOSE SYSTEMS ENGINEERING HANDBOOK 2015 [§4.3] and contributes to the System Requirements verification and traceability matrix (RVTM).

Stakeholder

- [Hardware Developer](#)
- [IV&V Engineer](#)
- [Project Manager](#)
- [Software Developer](#)
- [System Architect](#)

Concern

- What are the Interface Requirements imposed on the system?
- What are the exchange requirements imposed on the system?
- What are the functional requirements imposed on the system?
- What are the non-functional requirements imposed on the system?
- What are the requirements of environmental conditions imposed on the system?
- What is the range of acceptable system performance, i.e. the critical, top-level performance requirements derived from the operational needs?
- Which Stakeholder Requirements are addressed by System Requirements?

Presentation

A System Requirement Table (RVTM) featuring

- unique requirement ID, text and attributes
- traceability reference to upstream model elements and requirements
- traceability reference to depended requirements on the same abstraction level
