

# System State Viewpoint

Domain: **Functional** Aspect: **Process & Behavior**

## Example

## Purpose

The System State Viewpoint defines the condition(s) of the SOI or parts of it that constrain the execution of System Functions. A System State is a pre-condition or post-condition of a Use Case, or is used in Requirements. The valid transition(s) between System States and the conditions for transitioning are specified.

## Applicability

[tbd]

## Stakeholder

- [Hardware Developer](#)
- [IV&V Engineer](#)
- [Maintainer](#)
- [Regulation Authority](#)
- [Safety Expert](#)
- [Security Expert](#)
- [Software Developer](#)
- [System Architect](#)

## Concern

---

- Which modes and states does the system have?
- Which system functions are dependent on a systems mode or state?

## Presentation

---

[tbd]
