

System Requirement Viewpoint

Domain	Aspect	Maturity
Functional	Requirement	released

Example

Purpose

The System Requirement Viewpoint specifies functions, non-functional propertys, or constraints of the system. System Requirements are captured, the interrelationships between functional and non-functional requirements on the same level of abstraction and the traceability to Stakeholder Requirements are depicted.

Applicability

The System Requirement Viewpoint supports the "System Requirements Definition Process" activities of the INCOSE SYSTEMS ENGINEERING HANDBOOK 2015 [§4.3] and contributes to the System Requirements verification and traceability matrix (RVTM).

Stakeholder

- Hardware Developer
- IV&V Engineer
- Project Manager
- Software Developer
- System Architect

Concern

- · What are the Interface Requirements imposed on the system?
- · What are the exchange requirements imposed on the system?
- · What are the functional requirements imposed on the system?
- · What are the non-functional requirements imposed on the system?
- · What are the requirements of environmental conditions imposed on the system?
- What is the range of acceptable system performance, i.e. the critical, top-level performance requirements derived from the operational needs?
- Which Stakeholder Requirements are addressed by System Requirements?

Presentation

A System Requirement Table (RVTM) featuring

- unique requirement ID, text and attributes
- traceability reference to upstream model elements and requirements
- · traceability reference to depended requirements on the same abstraction level
