

# **Physical Context Definition Viewpoint**

Domain	Aspect	Maturity
Physical	Context & Exchange	under construction

# **Example**

none

### **Purpose**

The Physical Context Definition Viewpoint identifies the different context the system is used in, along with the associated external entities sharing a physical interface with the system. For each context the applicable environmental conditions may be defined. The physical context helps in discovering the Interface Requirements needed to integrate a system into its environment in a specific context. NOTE: For each candidate system architecture, the physical context Viewpoint is elaborated forming the baseline for the later assessment of the different system architecture solutions.

# **Applicability**

The Physical Context Definition Viewpoint supports the "Architecture Definition Process" activities of the INCOSE SYSTEMS ENGINEERING HANDBOOK 2015 [§ 4.4]. The Viewpoint is used to define context, boundaries, and external interactions of the SOI in the physical domain. NOTE: Only those external entities are identified that share a physical interface. Other entities connected via a network are subject of the logical system context.

### Stakeholder

- Acquirer
- Customer
- · Hardware Developer
- IV&V Engineer
- Safety Expert
- Software Developer

- Supplier
- System Architect

#### Concern

- How does the system or a system element interact with the test environment?
- · What are necessary enabling systems?
- · What are the external physical entities the system interacts with in the respective context?
- What is the system boundary definition?
- What kind of test equipment is necessary to test the system elements?

#### **Presentation**

The following artifacts support the modeling activities: The physical context definition diagram (BDD) defines the elements available in a specific context. At least one physical context definition diagram is used per identified context, featuring

- one block representing the Physical System i.e. the system of interest
- one block representing the specific Physical System Context
- several blocks representing Physical Context Elements such as Physical User, Physical External System, and Physical Environment present in the systems context
- composition relationships attaching the Physical Context Elements and the Physical System to the Physical System Context block
