#	△ Term	Synonyms	Description Animal Pohaviar Classification	Active Hyperlink
1	t Animal Behavior	ABC	Animal Behavior Classification A combustion is a fast and exothermic	
2	t Combustion		oxidative reaction that releases heat, requiring an oxidizing agent to burn the fuel. In the case of a forest fire this oxidizing agent is the air in the atmosphere with the vegetation being the fuel.	
3	t Distress Signal		A distress signal, also known as a distress call, is an internationally recognized means for obtaining help. Distress signals are communicated by transmitting radio signals, displaying a visually observable item or illumination, or making a sound audible from a distance.	
4	Empirical Model	Empirical Models	Fully empirical models rely on statistical correlation between variables known to influence fire spread, such as wind speed, slope, and fuel moisture content, with field observations of rates of spread. Empirical methods are incorporated into the national operational models of fire spread used in Canada, the Canadian Fire Behavior Prediction Model (Forestry Canada Fire Danger Group, 1992), and in Australia, the McArthur grassland	
5	t Environment Interface	EIF	Environment Interface	
6	t Fire Detection		It is essential to set up an effective surveillance network which allows to reduce the time between the ignition and the detection of the forest fire. It focuses particularly on all activities which can cause a fire. The surveillance is based on the combination of various observation and detection means, either mobile or fixed, terrestrial or aerial. The combination of the surveillance and the first intervention, performed by the same team having terrestrial	
7	Fire Information	FIMS	Fire Information Management System	
8	t Forest Fire	FF	A forest fire involves combustion of organic material (fuel) that releases a large quantity of energy. The combustion energy is transferred from the burning fuel to unburned fuels ahead of the fire front. This phenomenon ensures the fire spread. The fire start depends on the flammability of the vegetation. The fire spread depends on a number of variables, including fuel characteristics (size, moisture content and arrangement), weather and topography.	
9	t Forest Fire Detection	FFDS	Forest Fire Detection System	
10	† Forest Fire Information	FFIM	Forest Fire Information Management	
11	Forest Fire Information Management Control	FFIMC2	Forest Fire Information Management Control Center	
12	Forest Sensor Ecosystem	FSE	Forest Sensor Ecosystem	
13	t Geolocation		Geolocation is the identification or estimation of the real-world geographic location of an object, such as a radar source, mobile phone, or Internet-connected computer terminal. In its simplest form, geolocation involves the generation of a set of geographic coordinates and is closely related to the use of positioning systems, but its usefulness is enhanced by the use of these coordinates to determine a meaningful location, such as a street address.	
14	t Human Interface	HIF Physical Models	Human Interface Physical models of fire spread estimate the flux between burning and unburned fuel in order to determine the rate of fire spread. The prevailing assumption of this approach is that all heat	
15	t Physical Model		transfer involved in the combustion reaction satisfies the conservation of energy. The conservation of energy is expressed as an equation in the figure to the right. This equation states that, under steady-state conditions, the rate of fire spread, R, in m/s, is equal to the ratio	
16	t Remote Sensing		Remote sensing is the acquisition of information about an object or phenomenon without making physical contact with the object, in contrast to in situ or on-site observation.	https://en.wikipedia.org/wiki/en
17	t Smoke and Fire Detection	SFDS	Smoke and Fire Detection Software	
18	System Interface	SIF WSN	System Interface Wireless sensor networks refer to networks of spatially dispersed and dedicated sensors that monitor and record the physical conditions of	
19	t Wireless Sensor Network		the environment and forward the collected data to a central location. WSNs can measure environmental conditions such as temperature, sound, pollution levels, humidity and wind.	

	Term S	nonyms Description	Active Hyperlink
1	th buts octe	8-bit binary integer in the range [0, 255] where the most significant bit is bit 7 and the least	
_	t byte	significant bit is bit 0	
2	t byte order	ordering of bytes for multi-byte data values	
		pair of x and y values in the xyY space specified at [COLORIMETRY]	
	thromaticity	Note: Chromaticity is a measure of the quality of a color regardless of its luminance.	
		form an image by merging a foreground image and a background image, using transparency	
		information to determine where and to what extent the background should be visible	
4	composite (verb)	Note	
		The foreground image is said to be composited against the background.	
5	t datastream	sequence of bytes	
6	t deflate	member of the LZ77 family of compression methods	https://www.rfc-editor.org/rfc/rfc19
7	t frame	For static PNG, the static image is considered to be the first (and only) frame. For animated PNG, each image that forms part of the frame-based animation sequence is a frame. Thus, for	
		animated PNG, when the static image is not the first frame, the static image is not considered to be a frame.	
8	frame buffer	the final digital storage area for the image shown by most types of computer display. Note	
	name builei	Software causes an image to appear on screen by loading the image into the frame buffer.	
9	t fully transparent black	pixel where the red, green, blue and alpha components are all equal to zero	
10	t gamma value	value of the exponent of a gamma transfer function	
11	t gamma	power-law transfer function	
	HDF	an image format capable of storing images with a relatively high dynamic range similar to or in	
12	t high dynamic range	excess of the human visual system's instantaneous dynamic range (~12-14 stops). PNG allows the use of two HDR formats, HLG and PQ.	
13	thybrid log-gamma HLG	transfer function defined in [ITU-R-BT.2100] Table 5. (A relative scene-referred system)	https://www.itu.int/rec/R-REC-BT.21
1.4		image where reference black and white correspond, respectively, to sample values 0 and 2^(bit	
14	t full-range image	depth) - 1	
15	t image data	1-dimensional array of scanlines within an image	
16	t interlaced PNG image	sequence of reduced images generated from the PNG image by pass extraction	
17	t lossless	method of data compression that permits reconstruction of the original data exactly, bit-for-bit	
18	t LZ77	data compression algorithm described in [Ziv-Lempel].	https://ieeexplore.ieee.org/do0557
		perceived brightness of a colour	
19	t luminance	Note Luminance and chromaticity together fully define a perceived colour. A formal definition of	
		luminance is found at [COLORIMETRY].	
20	narrow-range image	Image where reference black and white do not correspond, respectively, to sample values 0 and 2^(bit depth) - 1	
		byte order in which the most significant byte comes first, then the less significant bytes in	
21	t network byte order	descending order of significance (MSB LSB for two-byte integers, MSB B2 B1 LSB for four-byte integers)	
	PQ	transfer function defined in ITU-R BT.2100 Table 4. (An absolute display-referred system)	
22	t perceptual quantiser	Note	
	perceptual quantisei	O L DCD LL LL DNG IGIG L NOT	
		Only RGB may be used in PNG, ICtCp is NOT supported.	
23	PNG decoder	process or device that reconstructs the reference image from a PNG datastream and generates a corresponding delivered image	
24	t PNG editor	process or device that creates a modification of an existing PNG datastream, preserving unmodified ancillary information wherever possible, and obeying the chunk ordering rules, even	
		for unknown chunk types	
25	t PNG encoder	process or device which constructs a reference image from a source image, and generates a PNG	
		datastream representing the reference image	
26	PNG file	PNG datastream stored as a file	
		a four-byte unsigned integer limited to the range 0 to 2^31-1.	
27	FNG four-byte unsigned inte	Note	
		The restriction is imposed in order to accommodate languages that have difficulty with unsigned	
		four-byte values.	
28	t sample	intersection of a channel and a pixel in an image	
29	t sample depth	number of bits used to represent a sample value	
30	t scanline	row of pixels within an image or interlaced PNG image.	
	SDR	an image format capable of storing images with a relatively low dynamic range of 5-8 stops. Examples include sRGB, Display P3, ITU-R BT.709	
31	t standard dynamic range	Note	
- 1	- standard dynamic range	Standard dynamic range is independent of the primaries and hence, gamut. Wide color gamut	
		SDR formats are supported by PNG.	
		a change in scene light luminance of a factor of 2.	1
32	t stop	a change in scene light laminance of a factor of 2.	
	t stop t transfer function	function relating image luminance with image samples	
3		· · · · · · · · · · · · · · · · · · ·	
33	t transfer function	function relating image luminance with image samples chromaticity of a computer display's nominal white value. type of check value designed to detect most transmission errors.	
33 34	t transfer function white point CRC	function relating image luminance with image samples chromaticity of a computer display's nominal white value.	
32 33 34 35	t transfer function t white point	function relating image luminance with image samples chromaticity of a computer display's nominal white value. type of check value designed to detect most transmission errors. Note A decoder calculates the CRC for the received data and checks by comparing it to the CRC	
33 34	t transfer function white point CRC	function relating image luminance with image samples chromaticity of a computer display's nominal white value. type of check value designed to detect most transmission errors. Note A decoder calculates the CRC for the received data and checks by comparing it to the CRC calculated by the encoder and appended to the data. A mismatch indicates that the data or the	
33 34	t transfer function white point CRC	function relating image luminance with image samples chromaticity of a computer display's nominal white value. type of check value designed to detect most transmission errors. Note A decoder calculates the CRC for the received data and checks by comparing it to the CRC calculated by the encoder and appended to the data. A mismatch indicates that the data or the CRC were corrupted in transit	
33 34	transfer function white point CRC Cyclic Redundancy Code	function relating image luminance with image samples chromaticity of a computer display's nominal white value. type of check value designed to detect most transmission errors. Note A decoder calculates the CRC for the received data and checks by comparing it to the CRC calculated by the encoder and appended to the data. A mismatch indicates that the data or the	
33 34	t transfer function white point CRC	function relating image luminance with image samples chromaticity of a computer display's nominal white value. type of check value designed to detect most transmission errors. Note A decoder calculates the CRC for the received data and checks by comparing it to the CRC calculated by the encoder and appended to the data. A mismatch indicates that the data or the CRC were corrupted in transit deflate-style compression method. SOURCE: [rfc1950]	★ https://www.rfc-editor.org/rfc/rfc19
33 34 35	transfer function white point CRC Cyclic Redundancy Code	function relating image luminance with image samples chromaticity of a computer display's nominal white value. type of check value designed to detect most transmission errors. Note A decoder calculates the CRC for the received data and checks by comparing it to the CRC calculated by the encoder and appended to the data. A mismatch indicates that the data or the CRC were corrupted in transit deflate-style compression method. SOURCE: [rfc1950] Note	https://www.rfc-editor.org/rfc/rfc19
33 34 35	transfer function white point CRC Cyclic Redundancy Code	function relating image luminance with image samples chromaticity of a computer display's nominal white value. type of check value designed to detect most transmission errors. Note A decoder calculates the CRC for the received data and checks by comparing it to the CRC calculated by the encoder and appended to the data. A mismatch indicates that the data or the CRC were corrupted in transit deflate-style compression method. SOURCE: [rfc:1950] Note Also refers to the name of a library containing a sample implementation of this method	https://www.rfc-editor.org/rfc/rfc19
333 344 355	transfer function white point CRC Cyclic Redundancy Code	function relating image luminance with image samples chromaticity of a computer display's nominal white value. type of check value designed to detect most transmission errors. Note A decoder calculates the CRC for the received data and checks by comparing it to the CRC calculated by the encoder and appended to the data. A mismatch indicates that the data or the CRC were corrupted in transit deflate-style compression method. SOURCE: [rfc1950] Note	https://www.rfc-editor.org/rfc/rfc19
33 34 35	transfer function white point CRC Cyclic Redundancy Code	function relating image luminance with image samples chromaticity of a computer display's nominal white value. type of check value designed to detect most transmission errors. Note A decoder calculates the CRC for the received data and checks by comparing it to the CRC calculated by the encoder and appended to the data. A mismatch indicates that the data or the CRC were corrupted in transit deflate-style compression method. SOURCE: [rfc1950] Note Also refers to the name of a library containing a sample implementation of this method vacuum tube containing one or more electron guns, which emit electron beams that are	https://www.rfc-editor.org/rfc/rfc19

Purpose

The Common Terms Definition Viewpoint supports the definition of applicable terms ... [tbd] ...

Applicability

The Common Terms Definition Viewpoint supports the[tbd] activity part of the... [tbd]... activities of the INCOSE SYSTEMS ENGINEERING HANDBOOK 2023 [§ tbd].

Presentation

A table format listing terms ...[tbd].

A table format listing abbreviations and relationship to standards if applicable... [tbd].

Stakeholder

- Hardware Developer
- · Mechanic Developer
- Software Developer

Concern

- What are the sources (e.g. a standard) of terms?
- Which terms and abbreviations are applicable to the system of interest or its system elements and their interfaces and interactions?

Profile Model Reference

The following Stereotypes / Model Elements are used in the Viewpoint:

- SAF_Term contained in SAF_Standard
- SAF_C2_TRMD
- SAF_Standard
- SAF Term
