

# **System Requirement Viewpoint**

Domain	Aspect	Maturity
Functional	Requirement	released

## **Example**

### **Purpose**

The System Requirement Viewpoint specifies function(s), non-functional property(s), or constraint(s) of the system. System Requirement(s) are captured, the interrelationships between functional and non-functional requirement(s) on the same level of abstraction and the traceability to Stakeholder Requirement(s) are depicted.

## **Applicability**

The System Requirement Viewpoint supports the "System Requirements Definition Process" activities of the INCOSE SYSTEMS ENGINEERING HANDBOOK 2015 [§4.3] and contributes to the system requirements verification and traceability matrix (RVTM).

### Stakeholder

- Hardware Developer
- IV&V Engineer
- Project Manager
- Software Developer
- System Architect

#### Concern

- · What are the exchange requirements imposed on the system?
- What are the functional requirements imposed on the system?
- · What are the interface requirements imposed on the system?
- · What are the non-functional requirements imposed on the system?
- What are the requirements of environmental conditions imposed on the system?
- What is the range of acceptable system performance, i.e. the critical, top-level performance requirements derived from the operational needs?
- Which stakeholder requirements are addressed by system requirements?

#### **Presentation**

A System Requirement Table (RVTM) featuring

- unique requirement ID, text and attributes
- traceability reference to upstream model elements and requirements
- · traceability reference to depended requirement(s) on the same abstraction level
